Vitaly Zaslavsky Citizen of the World · Remote around UTC+3 or relocation

Summary

I have Linux on all my home and job devices. When my boss gave me a MacBook I asked if I could install Linux on it. He said "No" and gave me HP. I'm not a Linux-maniac. But for me, it's the most comfortable OS.

Love everything about DevOps, automation and stability. I have a passion for everything I do. Have sufficient experience in Docker and good expertise in Kubernetes, Helm and Terraform. I can (and do) wrap everything in a container. Even if it's a GUI application. (Sometimes it's easier to use Docker than resolve dependencies issues)

I love to create a local development process for Backend developers (as a Backend developer in the past) as comfortable as possible from the very start. And this is my strong side: I can debug applications, find issues and create Pull Requests with changes right in application code.

I have experience in Scrum and Kanban methodologies. Can track time and move cards in the right columns. Sometimes I can annoy a little when trying to clarify every little thing related to my task or current workflow.

Have good relations with employees. I really like peaceful holy wars with colleagues, discussing some technical stuff and approaches. Love to work in a team and share my knowledge with others and gain wisdom from more experienced people.

I have no bad habits (except programming in free time). I don't smoke and don't have morning headaches after drinking (because I don't drink to drunk)

Languages

- **Russian** Native
- **English** Conversational (B1; Thanks YouTube)

Personal Life a little about

Some of my current hobbies:

- Music. Guitar and Piano playing. Singing sometimes. And (of course) listening. Graduated from music school class classical guitar;
- Blogging about everything. Not only about work;
- Programming. Yes, even after work. Currently, actively use Go and JavaScript to automate some things. Currently, fell in love with Rust

I'm a happy husband of my beloved wife for 10.2962644 years. She really helps me in my path of life emotionally and physically as a family hearth keeper.

We love animals. We have the black panthera-like cat Json (this word always sounds like a name for me) and little sweetie girl Pixel (Pixie for short). Also, we love foxes so much. That's why my logo and background with fox face

Employment History

DevOps Engineer — Novakid Inc March 2022 - Present

San Francisco, California, United States (remote)

Results:

- Wrote a Rust (Pingora) WebSocket load balancer with sticky routing: 25k concurrent connections at peak
- Built a serverless framework for developers: Terraform modules for Lambdas, layers, Step Functions, API Gateway
- Owned CI/CD on Jenkins: pipelines and the shared library for every service
- Co-built the observability: VictoriaMetrics, VictoriaLogs, alerting, Grafana OnCall, first Sentry
- Co-built a new production region in AWS China, laying its base infrastructure
- Co-built the EKS platform: 7 environments, production peaks at 1.2k pods and 6k RPS
- Co-built cost optimization: ARM/Graviton, Spot nodes, queue-based autoscaling
- Wrote an on-demand database scaler that has run 3 years without issues
- Watch production through on-call alerts; take part in off-peak deploy shifts

Primary project: Novakid

Industries: English learning platform, Teaching, Online Education

IaC: Terraform, Ansible, Packer, Kubernetes, Helm, Karpenter, KEDA, cert-manager, external-dns, Docker (+ Swarm, buildx)

AWS:

- **Compute:** EC2 (Graviton, Spot), ASG, Lambda (layers, function URLs), Batch
- **Containers:** EKS, ECR
- **Application Integration:** Step Functions, API Gateway, SQS, SNS, EventBridge (Scheduler, Pipes)
- **Database:** RDS, ElastiCache, DynamoDB
- **Networking & Content Delivery:** VPC, Route53, ALB/NLB, CloudFront, Global Accelerator
- **Security, Identity, & Compliance:** IAM, KMS, ACM, Secrets Manager, WAF
- **Management & Governance:** CloudWatch (Logs, Alarms), SSM Parameter Store
- **Cost Management:** Budgets
- **Storage:** S3, EFS, EBS

Regions: AWS Global and AWS China

CI/CD: Jenkins (Groovy shared libraries), Bitbucket Pipelines

Monitoring: VictoriaMetrics, VictoriaLogs, Vector, Fluent Bit, Grafana, Grafana OnCall, Sentry

Tools: HAProxy, ingress-nginx, Nginx, PostgreSQL, Redis, Vault

Workflow: Jira, Bitbucket

Extra: **Languages:** Rust (Pingora), TypeScript (Bun), Groovy, Python, Bash

DevOps Engineer — ScienceSoft November 2020 - March 2022

Minsk, Belarus (remote)

Results:

- Designed and built production AWS infrastructure from the ground up for 3 products with Terraform/Terragrunt, replacing hand-deployed servers
- Ran 14 ECS services on Spot capacity, scaling consumers on queue depth and APIs on CPU
- Replaced on-server image builds with self-hosted DroneCI on Spot runners and Kaniko
- Wrote Go Lambdas for ECS failure alerts and custom metrics
- Covered Terraform modules with Terratest; kept secrets in Sops with KMS
- Automated Aurora database clones for staging with a Lambda
- Deployed apps to EKS with ArgoCD and Helm

Primary projects: Linxio, Ultravioletsim, FairMoney

Industries: Logistics, IoT, FinTech

IaC: Terraform, Terragrunt (+ tflint, tfsec, terrascan, Terratest), Kubernetes, Helm, ArgoCD, Crossplane, Docker (+ hadolint, docker-compose), Kaniko, DroneCI

AWS:

- **Analytics:** OpenSearch (Elasticsearch)
- **Application Integration:** EventBridge, Amazon MQ (RabbitMQ), SNS, SQS
- **Business Applications:** SES
- **Compute:** EC2 (Spot), EIP, ASG, Lambda (Go, Ruby)
- **Containers:** ECS (EC2 and Fargate based; with intelligent autoscaling), EKS, ECR
- **Database:** RDS, Aurora, ElastiCache, DynamoDB (not a lot)
- **Developer Tools:** CodePipeline, CodeBuild, CodeCommit
- **Management & Governance:** CloudWatch (Logs, Metrics), CloudTrail, SSM (Session Manager, Patch Manager, Parameter Store, Run Command)
- **Networking & Content Delivery:** VPC + Security Groups, Route53, ALB/NLB, Cloud Map
- **Security, Identity, & Compliance:** IAM, KMS, ACM, Cognito, Secrets Manager
- **Storage:** S3, EBS, EFS

Monitoring: CloudWatch, DataDog

Tools: Nginx, RabbitMQ, Redis, PostgreSQL, MySQL, ElasticSearch

Workflow: Jira, Confluence, Kanban, Bitbucket, GitHub

Extra: **Languages:** Go, JavaScript, TypeScript, Bash, Rust
CLI: Git, Just, Makefile, Sops, AWS CLI, aws-vault, Restic, Gomplate

DevOps Engineer — Axmit November 2019 - October 2020

Petrozavodsk, Republic of Karelia

Results:

- Built central logging and monitoring for 8 clusters: ELK, Prometheus, Grafana, Slack alerts
- Moved 11 client projects to Kubernetes with Helm charts and GitLab CI
- Migrated a SaaS platform to Helm environments and new GCP clusters
- Automated daily volume snapshot backups on DigitalOcean
- Added E2E tests to CI pipelines with Slack failure alerts

DevOps: Kubernetes, Helm, cert-manager, HPA, Docker, Docker-Compose, Kaniko, GitLab-CI (CI/CD) (sincere love for two of them)

Cloud Platforms: DigitalOcean, GCP, AWS, Scaleway

Monitoring: ELK Stack, Filebeat, ElastAlert, Prometheus & Grafana, Sentry

Testing: WebdriverIO, Selenium

Tools: Nginx, HAProxy, Jsonnet, RabbitMQ, Redis, PostgreSQL, MySQL, S3, Apache Druid, n8n

Linux: SSH, Bash, Makefile, Git

Workflow: Youtrack, Confluence, Kanban, GitFlow

Extra: Ansible, Jenkins, Python, Go, Node.js (Just a smidge)

Mid-level PHP Developer — Axmit October 2018 - October 2019

Petrozavodsk, Republic of Karelia

Results:

- Lead backend contributor: tasks, badges, scoreboards and notifications
- Moved the app to multi-tenant SaaS, with data migration scripts
- Built JWT auth and Facebook, Twitter and Instagram integrations
- Introduced API and integration tests and code style checks

Primary Project:  Zelos

Backend: Laravel, Symfony Components, Composer, PostgreSQL, RabbitMQ, Nginx

API & Auth: REST, Swagger, JWT, OAuth (Socialite: Facebook, Twitter, Instagram)

Integrations: Firebase push, Google Cloud Storage, S3, Intercom

Code Quality: Codeception, CodeSniffer, PHP-CS-FIXER, PSR-2, PSR-12

Workflow: Youtrack, Confluence, Scrum, GitFlow

Linux: SSH, Bash, Makefile, Git

DevOps: Docker, Docker-Compose, GitLab-CI (CI/CD), Kubernetes, Selenium (As side skills)

Full Stack Web Developer — Molticlub August 2016 - October 2018

Saint Petersburg (remote)

Results:

- Built a car owners' cashback club alone from scratch: customer, contractor and admin areas
- Designed an event-sourced bonus wallet and a multi-level cashback engine
- Added live admin and contractor feeds over RabbitMQ and WebSockets
- Set up CI/CD: tests in Bitbucket Pipelines, Docker deploys with rollback

Primary Project: Molticlub

Backend: PHP7.x, Yii2 & Extensions, Symfony Components, Composer

Code Quality: Codeception & Behat & Selenium, CodeSniffer, PSR-2

Frontend: ReactJS & Redux & Saga & React-Router, Bootstrap, Webpack, Gulp, Sass, BEM, ESLint

Infrastructure: MySQL, Apache2, RabbitMQ, WebsocketD

Linux: SSH, Bash, Makefile, Git

DevOps: Vagrant, Docker, Docker-Compose, Bitbucket-Pipelines

House Painter — ACS November 2014 - July 2016

Videl, Republic of Karelia

Results:

- Renovated rooms from scratch, from bare walls to the finished interior
- Stripped old finishes, plastered and skimmed the walls, then painted them with enamel or emulsion paint or hung wallpaper

Primary Project: Videl Boarding House

Backend: Knauf Rotband, Primer

Frontend: Weber Vetonit, Emulsion Paint, Enamel Paint

Extra: Cleaning of Premises, Garbage Removal, Wall Crushing

Full Stack Web Developer — Macropod June 2013 - August 2014

Saint Petersburg

Results:

- Built complete websites end to end, from markup to backend, on Macropod, the company's own CMS
- Kept them lean: no heavy frameworks or libraries, only hand-written PHP, CSS and jQuery, so pages loaded almost instantly

Backend: PHP5.x (pure), Apache2, MySQL, PHPMyAdmin

Frontend: CSS3 (pure), HTML, jQuery & Plugins
